

Secure your identities across cloud and on-premises with Delinea and Microsoft Defender for Identity

Identity Security Challenge

Organizations are dealing with an exploding number of identities (human and machine) and with the expansion of endpoints, remote work styles, and new application environments, the threat landscape has grown in tandem. As attackers innovate, ransomware spreads wider, and as attackers use automation to scale, it is more challenging than ever to stay ahead of threats.

Delinea + Microsoft: Comprehensive visibility, risk monitoring and remediation for privileged identities

Delinea now integrates with Microsoft to empower organizations with an identity-centric approach to security, safeguarding against cyber threats and helping to identify and remediate security issues before they can be exploited by attackers.

Delinea Secret Server enables IT and security leaders to discover and secure privileged accounts, preventing unauthorized access with streamlined management and ensuring compliance by reducing risk to critical assets. Flexible deployment enables organizations to protect privileged accounts in weeks, not months, with unmatched security controls that provide comprehensive discovery, advanced automation, and AI-driven session analysis.

And, with 99.99% uptime guaranteed on the cloud-native Delinea Platform, Secret Server simplifies the management of privileged credentials, enabling organizations to enforce security policies consistently. By providing actionable insights and comprehensive reporting, it helps meet regulatory requirements and mitigate potential threats, making it an essential tool for modern IT security strategies.

Microsoft Defender for Identity is a cloud-based security solution that helps secure your on-premises identities across the organization. This modern identity threat detection is fully integrated with Microsoft Defender XDR, leveraging signals across hybrid environments, from both on-premises Active Directory and cloud identities, to help SecOps teams identify, detect, and investigate threats against their organization: breach prevention, threat detection, investigation of suspicious activities, and response to attacks. This improves security operations by enabling control of all identity security capabilities from a single pane of glass and onboarding of sensors on all identity infrastructure-related servers in the customer's environment and in the cloud, including Microsoft first-party capabilities alongside other third-party solutions.

Integrating the Delinea Secret Server with Microsoft Defender for Identity improves your organizations' security posture, enhances threat detection, and ensures comprehensive monitoring across your network in one centralized place. Leveraging these tools together ensures a more comprehensive defense against identity threats and approach to identity security. Together, Delinea and Defender for Identity secure and protect your mission critical assets by identifying and flagging suspicious activity in privileged accounts, allowing for quicker isolation, investigation, and remediation.

Integration Benefits

- ✓ **Continual Threat Detection:**
 - Integrating Delinea with Microsoft Defender for Identity enables a comprehensive view of security risks across your network.
 - Improve visibility of all privileged identities across Active Directory, EntraID, managed by Delinea Secret Server, from the Microsoft Defender portal.
- ✓ **Unified Monitoring**
 - Streamline remediation with a consolidated and centralized view of risk scores.
 - User behavior is analyzed, including login patterns, file access, and system interactions to ensure that no potential threat goes unnoticed.
- ✓ **Remediate threats**
 - Actionable insights ensure reduced dwell time.
 - Mitigate risk with immediate actions when anomalies are identified (ex: rotate a password, disable user).
- ✓ **Flexible deployment**
 - Delinea integrations seamlessly fit into your existing on-premises, cloud or hybrid environments.
 - Delinea solutions are simple to configure and get started – nothing additional to install or manage.
- ✓ **Simplified Compliance**
 - Ensure compliance with full audit trail and monitoring of all session activity.
 - Out of Box templates and easy reporting simplify proof of compliance across teams.

Figure 1: Solution Overview

Delinea

Delinea is a pioneer in securing identities through centralized authorization, making organizations more secure by seamlessly governing their interactions across modern enterprise. It applies context and intelligence throughout the identity lifecycle, across cloud and traditional infrastructure, data, and SaaS applications to eliminate identity-related threats. Delinea uniquely provides intelligent authorization for all identities, allowing precise user identification, appropriate access assignment, interaction monitoring, and swift response to irregularities. The Delinea Platform accelerates adoption and boosts productivity, deploying in weeks, not months, requiring just 10% of the resources compared to competitors.
